

Dear Sir,

Herewith we want to introduce ourselves; we are a company with a lot off experience on several disciplines. This is our way to give an impression about the possibilities to make use off our services. Our disciplines:

- Engineering
- Company management
- Constructions
- Welding services
- Construction management
- Project management
- Financial management off the projects
- Inspection of vessels and installations

Projects

- Installation of air treatment cabinet for sterile air pressure on filling machines.
- Installation of several filling machines
- The building for cartons storage.
- Renovation of floor tiles in a filling location with a new sanitary construction for the carton conveyors.
- Asphalt pavement of the factory area.
- The replacement of several vessels on very difficult places in the factory. Some vessels are built on site.
- The building of a control room.
- The building of hygiene sluice
- The design and guidance of a safety plan for a food plant.
- The installation of a waste water installation
- The installation of a sprinkler installation with a buffer of 400m³
- The building of a steel construction suitable for a total weight load of 1000 ton, including 6x 60 m³ vessels.
- Installation of several wraps arounds.
- The increasing of a filling department during normal production.
- The installation of several manifolds a making a new pipe bridge to get a logic Installation of the utilities to make at easy to understand.
- Installation of a street of in total 7x robots to stacking boxes and crates.
- The organisation of a special PMMA Floor in the cooling cell and was within 24 hours fully usable for heavy transportation.
- The installation within 24 hours for a temporary ice water installation and the preparation to install a new installation with the use of the old buffer storage. The new installation is based on the “falling film” principal.
- The inventarisation and making of a report of the status and sanitizing construction of all the vessels in three production locations.
- Making Total budgets for investments approvals.
- Making of project planning.

The building of a steel construction suitable for a total weight load of 1000 ton.

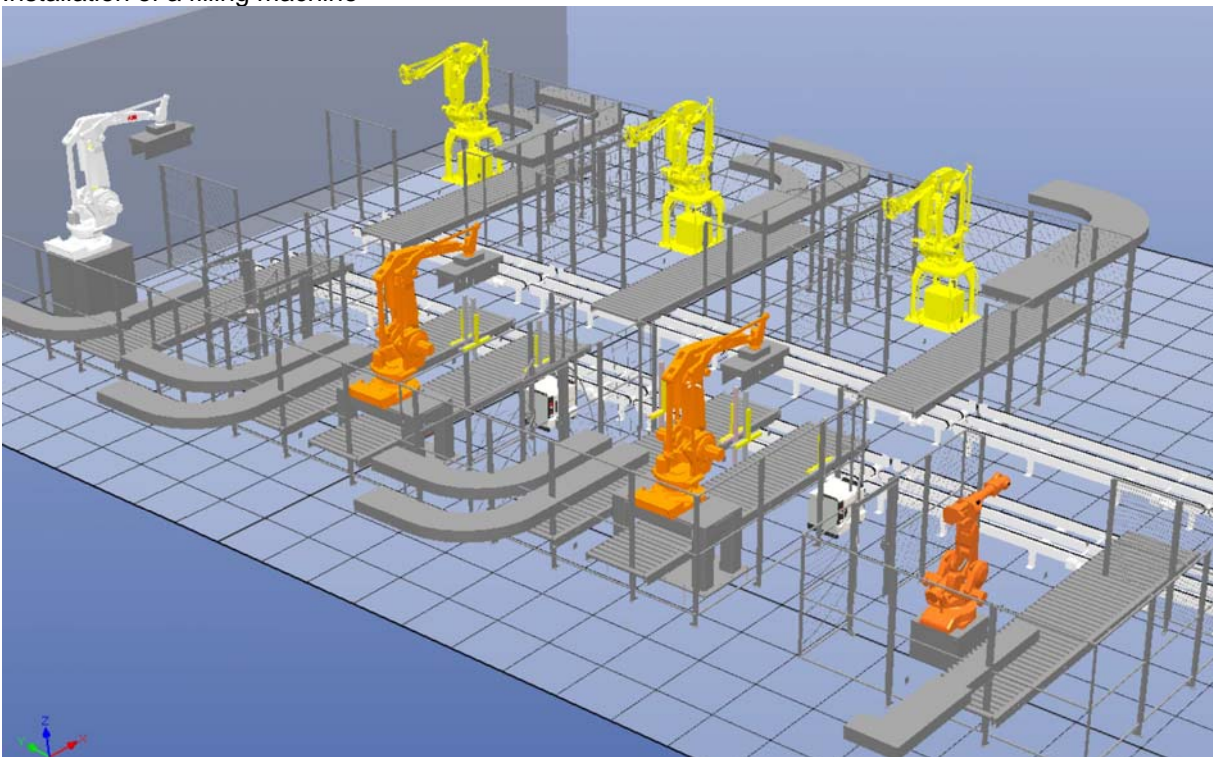

The building of a control room.

Installation of four new process vessels

Installation of a filling machine

Installation of a robot street

Installation of a manifold

The increasing of a filling department during normal production.

Installation of a filling machine

Installation of several wrap-arounds.

Installation of capper applicators.

The new ice water installation is based on the "falling film" principle.

The building of a pump pit for a waste water installation.
